Airbnb Clone This is a Full Stack Air bnb clone repository using Next.js13 App Router, React, Tailwind, Prisma, MongoDB, and NextAuth.
It has features such as Tailwind design, credential authentication, image upload using Cloudinary CDN, and advanced search algorithm.
It also has a booking/reservation system, favorites system, and shareable URL.
Additionally, it includes instructions on how to handle server error and loading states, create and delete properties, and handle relations between server and child components.
